

# GOIS DOUBLE ROLLER PURSE RING IDEAL NEW MODEL CONFIGURATION GOIS A2 & A3

The following is a list of some of the advantages of using the lighter, more compact Gois A3 Rings on the ends of the net, with the heavier, stronger Gois A2 Rings in the center of the net.

**\*Important Note:** When the lighter Gois A3 Rings are used as recommended, these rings are more than strong enough for the application.

- ✓ During pursing, the lighter Gois A-3 Rings will be easier to keep the net clear from the cable, if the net is going on top of the cable and rings.
- ✓ When the main boom is lifted to its highest position, at the beginning of rolling the net aboard the vessel, the lighter Gois A-3 Rings will be safer to use.
- ✓ When sacking up, the lighter Gois A3 Ring is safer and easier to use, as each section of net is lifted up and dropped down.
- ✓ When the main boom is put down, and the last, thickest part of the net (the sack) is rolled aboard the boat, the net tends to twist; the lighter Gois A3 Ring is much easier to pull out of the net.
- ✓ In addition, the less expensive Gois A3 Rings, can help pay for the more expensive Gois A2 Rings
